

Interlocking Traffic Barrier

This plastic barrier is designed for traffic control and safety. Constructed from high-impact polyethylene, it features interlocking sections and a checkered pattern for high visibility.

Product Overview

Durable Traffic Control Solution

This interlocking traffic barrier is engineered for high-impact durability and maximum visibility in demanding environments. Constructed from robust polyethylene, the system features an interlocking design that allows for the creation of continuous, secure barricades. Its distinct red and white checkered pattern ensures high visibility, making it an ideal safety solution for construction sites, public events, and crowd management.

Technical Specifications

Material	High-impact polyethylene
Key Features	Interlocking, High Visibility, Weather-Resistant, Easy Deployment

Applications

Recommended Use Cases

- Construction Sites
- Event Management
- Crowd Control
- Traffic Safety
