

Intermodal Shipping Container

This standard intermodal container is used for shipping goods via sea, rail, or road. It is made of corrugated steel with doors on one end for loading and unloading.

Overview

Intermodal Shipping Container

This standard intermodal shipping container is engineered for the efficient transport of goods across sea, rail, and road networks. Constructed from durable, corrugated steel, it provides a secure and weather-resistant environment for cargo. Designed to be stackable and intermodal-compatible, this unit streamlines logistics operations by allowing for rapid transfer between different transport modes.

Construction & Design

Material	Corrugated Steel
Design Features	Stackable, Intermodal Compatible, Weather-Resistant, End-Loading Doors

Logistics Compatibility

Suitable Transport Modes

- Maritime Shipping
- Rail Freight
- Road Haulage
