

Internal Combustion Engine

This internal combustion engine provides mechanical power through the combustion of fuel and air. It is suitable for use in vehicles and other machinery.

Overview

Industrial Material Handling Solution

This LPG-powered forklift is designed as a robust and reliable solution for demanding material handling tasks. It combines efficient engine performance with reduced emissions, making it suitable for various industrial environments. With a 2.5-ton lifting capacity and an ergonomic design, it prioritizes both operator comfort and long-term durability.
