

Internal Rubber Mixer for Compound Dispersion

This internal mixer is designed for efficient mixing of rubber and plastic compounds. It is available in 55L, 75L, and 110L capacities and features robust construction and advanced mixing technology.

Product Overview

High-Efficiency Internal Rubber Mixer

This internal mixer is engineered for the precise and efficient processing of rubber and plastic compounds. It features robust construction to ensure durability under heavy-duty industrial use and utilizes advanced mixing technology to achieve superior, uniform dispersion of ingredients. Designed for consistent output, this equipment is an ideal solution for manufacturers seeking to maintain high-quality standards in their final rubber and plastic products.

Technical Specifications

Available Capacities

- 55L
- 75L
- 110L

Primary Application

Rubber Compounding, Plastic Compounding, Material Dispersion

Performance Features

Key Performance Metrics

55 L

Base Capacity

110 L

Max Capacity

Build Quality

Robust Construction • Uniform Dispersion • Industrial Grade
