

Internal Thread Cutting Tap

This tap is designed for creating internal threads in various materials. It features precision-ground flutes for efficient chip evacuation and a specialized coating for enhanced wear resistance and reduced friction.

Product Overview

Precision Internal Threading Solution

This high-performance internal thread cutting tap is engineered for reliable and accurate thread formation across a variety of materials. It features precision-ground flutes designed to maximize chip evacuation efficiency, preventing clogs and ensuring smooth operation. Enhanced with a specialized coating, the tool provides superior wear resistance and reduced friction, extending service life in demanding environments.

Technical Specifications

Key Features

- Precision-ground flutes for efficient chip evacuation
- Specialized coating for enhanced wear resistance
- Reduced friction surface treatment
- Robust shank design for secure tool holding

Operational Suitability

High Performance • Versatile • Wear Resistant

Application Compatibility

Manual Tapping, Machine Tapping
