

Interphone Paging Communication System

This system features a base station with integrated speaker and microphone, a remote speaker unit, and a handheld pager. It is suited for environments requiring reliable communication.

Overview

Comprehensive Communication Solution

The Interphone Paging Communication System is a versatile solution designed for efficient, reliable communication in professional environments. The system includes a central base station with an integrated speaker and microphone, a remote speaker unit for secondary location coverage, and a portable handheld pager for mobile alerts. This setup is ideal for offices, hospitals, and other facilities requiring clear, instant connectivity.
