

Inverter CO2 Protective Welding Machine

This inverter CO2 protective welding machine is lightweight and simple to install. It provides stable wire feed speed and unapparent splashing for efficient welding.

Overview

Professional CO2 Protective Welding Solution

The NBC-M Series Inverter CO2 Protective Welding Machine is engineered for efficiency and reliability in professional and industrial welding environments. Utilizing advanced inverter technology, this unit delivers stable and consistent welding performance with precise control over parameters. Designed for ease of use, it features a lightweight build and simple installation process, ensuring high-quality welds with minimal spatter to enhance productivity.

Technical Specifications

Model Series	NBC-M Series
Welding Technology	Inverter CO2 Protective Welding

Performance Features

Key Performance Benefits

- Lightweight design for portability
- Simple and quick installation
- Reduced spatter for cleaner welds
- Stable wire feed speed

Weld Quality

Minimal Spatter • Stable Performance • High Quality
