

Inverter MMA TIG CUT Welding Machine

This inverter welding machine is designed for MMA, TIG, and plasma cutting applications. Its adjustable settings allow for precise control over welding parameters, and the compact design with a carrying handle enhances portability.

Overview

Versatile Multi-Process Welding System

This advanced inverter-based welding machine combines MMA, TIG, and Plasma Cutting capabilities into a single, compact unit. Engineered for high efficiency and energy savings, it features touch arc ignition technology to ensure stable performance and compliance with EMC standards. Its lightweight, portable design makes it an ideal solution for professionals requiring a versatile tool for various metal fabrication and cutting tasks.

Technical Features

Technology Benefits

- High power utilization rate
- Low open circuit loss
- Touch arc ignition technology
- EMC standard compliant

Supported Processes

MMA, TIG, Plasma Cutting

Design & Portability

Physical Characteristics

1 Yes Compact Design	1 Yes Portable
