

# Inverter Plasma Cutting Machine

This is an inverter plasma cutting machine. It is designed for precision cutting of various metals and offers adjustable current settings and an efficient cooling system.

## Product Overview

### Industrial Plasma Cutting Performance

The LG-60E is a high-performance inverter plasma cutting machine engineered for precision cutting across a variety of metal types. Designed for industrial applications, it features adjustable current settings and an efficient cooling system to ensure consistent, reliable results. Built with durability in mind, this machine combines robust construction with a user-friendly interface to meet demanding production requirements.

## Technical Specifications

|            |                 |
|------------|-----------------|
| Model      | LG-60E          |
| Technology | Inverter Plasma |

## Performance Metrics

### Cutting Capabilities

**60 A**  
Max Current

## Features
