

Iron Bracket with Welded Nut

This is a metal bracket designed for mounting components. It features a centrally welded nut for easy attachment of other parts.

Product Overview

Precision Component for Electrical Appliances

This iron bracket with a centrally welded nut is a specialized component designed for robust fastening in household electrical appliances, particularly electric irons. Featuring a durable rectangular design with elongated mounting holes, it ensures precise alignment and secure installation. The assembly is finished with a protective coating to offer excellent corrosion resistance, ensuring long-term reliability in demanding thermal environments.

Technical Specifications

Surface Treatment

Zinc Plated • Corrosion Resistant

Design Characteristics

Rectangular Bracket, Welded Hex Nut, Elongated Mounting Holes

Application

Primary Applications

- Household Electrical Appliances
- Electric Steam Irons
