

# Iron Flywheel Shell with Multiple Ports

This iron flywheel shell is designed with a pin hole aperture of  $\pm 18 - \pm 20$  and precise pin hole positioning. It features a large mouth diameter ranging from 420 to 440, ensuring seamless integration within mechanical systems.

## Product Overview

### Engine Main Support Component

This iron flywheel shell serves as a critical engine component, functioning as a main support structure within automotive systems. Designed to act as a robust flywheel cover, it facilitates the essential connection to the transmission for efficient power transfer. Its durable construction is engineered to meet the high demands of heavy-duty mechanical environments.

## Technical Details

### Surface Finish

Corrosion Resistant • Red Coating

### Key Features

- Heavy-duty construction
- Multiple bolt holes for secure attachment
- Integrated mounting points
- Rotational energy transfer support

### Material

Iron

### Primary Application

Automotive Engine, Transmission System, Mechanical Support
