

Jack-Up Offshore Drilling Platform

This jack-up drilling platform is designed for offshore drilling operations in water depths up to 40 meters. It is equipped with a drilling derrick capable of reaching depths of 6,000 meters.

Overview

Jack-Up Offshore Drilling Platform

This robust jack-up drilling platform is engineered for reliable offshore drilling operations in shallow to moderately deep waters. It features a stable triangular hull design with a four-leg system, providing a secure base for high-performance drilling equipment. Equipped with advanced safety systems and comprehensive support facilities, this platform is designed to withstand harsh marine environments while supporting exploration, development, and workover activities.

Technical Specifications

Dimensions	57.6m x 34m x 5.5m
Operating Water Depth	40 m
Drilling Depth	6000 m

Operational Details

Delivery Era	1970s
Key Features	Triangular Hull, Four-Leg System, Helipad, Living Quarters, Advanced Drilling Derrick
