

Jaw Crusher for Primary Crushing

The Jaw Crusher is designed for primary crushing applications in the construction and mining sectors. It utilizes a toggle mechanism to efficiently reduce large rocks and ore into smaller sizes, with adjustable discharge settings and high throughput capacity.

Overview

Robust Primary Crushing Solution

The PE Jaw Crusher is a heavy-duty machine engineered specifically for primary crushing applications within the construction and mining sectors. Utilizing a simple yet highly effective toggle mechanism, it generates substantial crushing forces to efficiently reduce large rocks and ore. Its durable, wear-resistant construction ensures a long service life with minimal maintenance requirements, making it a reliable asset for high-productivity operations.

Performance

Compatible Materials

- Granite
- Basalt
- Limestone
- River Gravel

Application

Primary Crushing, Construction, Mining

Design & Features

Key Features

Heavy-duty frame • Wear-resistant jaw plates • Adjustable discharge settings • Easy maintenance access
