

Jaw Crusher Manganese Wear Plate for C96 Crushers

This manganese casting jaw plate is specifically designed as a wear part for C96 jaw crushers. It provides high resistance to abrasion and impact for efficient material reduction.

ADDITIONAL IMAGES

Product Overview

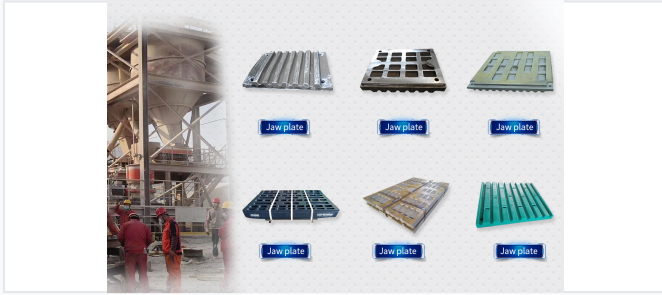

Engineered for optimal performance and durability in demanding aggregate crushing.

High-Performance Wear Parts

These high-manganese casting jaw plates are precision-engineered for C96 jaw crushers, specifically designed to withstand extreme abrasion and impact forces in heavy-duty mining and aggregate processing. By utilizing advanced casting and heat treatment processes, these wear parts provide superior durability and extended service life, helping to minimize operational downtime. They are an essential component for maintaining consistent crushing efficiency in demanding industrial environments.

Technical Specifications

Precision-cast manganese wear plates engineered for high impact resistance.

Durable manganese steel composition ensures long service life in crushing applications.

Material Composition	High Manganese Steel, Wear-Resistant Alloy
Compatible Equipment	C96 Jaw Crushers
Annual Production Capacity	30000 tons

Quality & Compliance

Certifications

ISO Certified • CE Compliant

Warranty Coverage

1-year warranty against hidden defects

Logistics & Support

Securely packaged wear parts ready for global transit.

Estimated Shipping Time

30 days

Delivery Time

Service Offerings

- OEM Service Available
- One-stop purchase service
- Confidential business handling

Support Response Time

Within 12 hours
