

JH21 Series Punch Press

JH21 series punch presses are designed for metal forming. The presses have robust construction, precision controls, and safety features.

Overview

JH21 Series Punch Press

The JH21 series represents a versatile range of punch presses engineered for high-performance metal forming applications. These machines are built with robust construction to ensure durability and consistent output across various industrial tasks. Featuring advanced precision controls and integrated safety mechanisms, this series is designed to enhance operational efficiency and reliability in professional manufacturing environments.

Models and Capacity

Available Models

- JH21-25B
- JH21-80
- JH21-250B

Key Features

Design Highlights

Robust Construction, Precision Controls, Enhanced Safety, Metal Forming
