

JIS 10k Globe Valve

This globe valve adheres to Japanese Industrial Standards (JIS) and is rated for 10k pressure. It is designed to stop, start, and regulate flow in various applications such as oil fields, chemical industries, and environmental protection systems.

Product Overview

JIS 10k Globe Valve Overview

This JIS (Japanese Industrial Standards) globe valve is engineered for 10k pressure ratings, providing reliable flow control in industrial pipeline systems. Designed for linear motion, it excels at starting, stopping, and throttling fluid flow, making it ideal for cooling water and fuel oil systems. Its robust cast steel construction ensures durability in demanding industrial environments.

Technical Specifications

Pressure Rating

10K

Standard

JIS (Japanese Industrial Standards)

Material

Cast Steel (WCB)

Operation

Manual (Handwheel)

Connection Type

Flanged

Typical Applications

Cooling Water Systems, Fuel Oil Systems, Industrial Fluid Handling
