

JIS Coaxial Cable

Coaxial cable with a center conductor, dielectric insulation and shielding layer is suitable for electronic signal transmission. It is available in BC (Bare Copper) and CCA (Copper Clad Aluminum) conductor types and conforms to JIS standards.

Product Overview

High-Performance JIS Coaxial Cable

This coaxial cable is engineered for reliable signal transmission across a variety of electronic applications. Built with a robust structure including a center conductor, dielectric insulation, and a protective shielding layer, it ensures signal integrity. Available in both Bare Copper (BC) and Copper Clad Aluminum (CCA) conductor types to suit specific project requirements.

Technical Specifications

Standards Compliance

JIS Standard

Conductor Material Options

Bare Copper (BC), Copper Clad Aluminum (CCA)

Construction Details

Cable Construction

- Center Conductor
- Dielectric Insulation
- Shielding Layer (Braided Copper or Aluminum)
- Outer Jacket
