

JIS Standard Y-Pattern Strainer

This Y-pattern strainer is designed for removing unwanted solids from fluid systems. It is constructed with flanged connections for straightforward installation and maintenance.

Overview

JIS Standard Y-Pattern Strainer

The JIS Standard Y-Pattern Strainer is a robust industrial component designed to efficiently remove unwanted solids from fluid systems. Featuring a Y-pattern design with flanged connections, it allows for easy installation and maintenance, ensuring long-term operational reliability. This strainer is essential for protecting pumps, meters, and other sensitive downstream equipment from damage caused by debris, making it a critical asset in various industrial piping applications.

Technical Specifications

Design Standard

JIS Standard

Size Range

DN 15 - DN 350

Connection Type

Flanged

Design Type

Y-Pattern
