

JIS Y-Type Cast Steel Strainer

This Y-type strainer is made from durable cast steel. It prevents backflow and removes particulate matter from liquids in oil fields, chemical plants, and coal mines.

Overview

JIS Y-Type Cast Steel Strainer

The JIS Y-type strainer is a robust filtration solution designed for industrial fluid systems. Engineered to meet JIS standards, this cast steel strainer effectively removes particulate matter from liquids, protecting critical downstream equipment and ensuring optimal system performance. Its Y-pattern design facilitates straightforward installation and maintenance, making it a reliable choice for demanding operational environments.

Technical Specifications

Pressure Rating

10K

Key Features

- Y-pattern configuration
- Cast steel construction
- Particulate filtration
- Easy maintenance access

Material Options

WCB, SCS13, SCS14

Design Standard

JIS

Connection Type

Flange
