

JS1500 Twin-Shaft Concrete Mixer

The JS1500 concrete mixer is designed for medium to large-scale concrete production. Its twin-shaft mixing system ensures thorough and homogeneous mixing of aggregates, cement, water, and additives.

Overview

High-Performance Twin-Shaft Mixing

The JS1500 is a robust and efficient twin-shaft concrete mixer engineered for medium to large-scale construction projects. Designed for superior homogeneity, it effectively blends aggregates, cement, water, and additives to deliver consistent, high-quality concrete output. This versatile machine is ideal for a wide range of applications, including building foundations, road construction, and precast concrete production.

Key Features

Key Advantages

Twin-Shaft System, High Capacity, Durable Construction, Precise Control, Safety Integrated

Technical Specifications

Model	JS1500
Mixer Type	Twin-Shaft

Operational Details

Control Interface

User-Friendly Control Panel • Precision Mixing Control

Maintenance

Minimal maintenance design with reliable, durable components
