

JZM350 Concrete Mixer

The JZM350 type concrete mixer is a self-falling concrete mixing machine that discharges concrete by reverse-rotation. It can mix plastic and semi-rigid concrete and is suitable for general construction sites, road, and bridge projects.

Product Overview

JZM350 Concrete Mixer

The JZM350 is a self-falling concrete mixing machine designed for versatility and reliability on construction sites. It features a reverse-rotation discharge mechanism, allowing it to efficiently mix both plastic and semi-rigid concrete. With its smooth operation and high production efficiency, this mixer is an ideal solution for road and bridge projects, as well as small to medium-sized concrete component manufacturing.

Technical Specifications

Mixer Type	Self-falling
Discharge Method	Reverse-rotation

Application

Common Applications

- General construction sites
- Road projects
- Bridge projects
- Concrete component factories

Suitable Materials	Plastic concrete, Semi-rigid concrete
--------------------	---------------------------------------

Key Features

Performance Features

Smooth operation • Easy operation • High production efficiency • High mixing quality
