

KN95 Mask Edge Sealing Machine

Automated edge banding machine designed for KN95 mask production. It features pneumatic cylinders for precise material handling and integrated control systems for efficient and consistent edge sealing.

Overview

Automated Edge Sealing Solution

This automated edge banding machine is specifically engineered for the efficient production of KN95 masks. It features a robust aluminum frame construction, pneumatic cylinders for precise material handling, and integrated control systems to ensure consistent edge sealing. Designed for industrial environments, the machine's modular layout allows for easy maintenance and seamless integration into existing production lines.

Performance

Production Capacity

500 PCS/HOUR

Technical Specifications

Key Machine Features

- Integrated control systems
- Multiple workstations for simultaneous processing
- Adjustable parameters for various mask sizes
- Modular design

Frame Construction

Robust aluminum frame

Material Handling

Pneumatic cylinders
