

KN95 Particulate Respirator

This KN95 mask is a respiratory protective device designed for efficient filtration of airborne particles. It is constructed with multiple layers of non-woven fabric and features an adjustable nose clip and elastic ear loops.

Product Overview

KN95 Respiratory Protection

The KN95 mask is a high-efficiency respiratory protective device engineered for a secure facial fit and superior filtration of airborne particles. It filters at least 95% of airborne particles, providing a robust physical barrier against dust, droplets, and aerosols. Constructed with multiple layers of non-woven fabric, this mask is designed for comfort and ease of use in professional environments.
