

Knurled Grip Steel Bar for Machining

This high-strength metallic bar is designed for industrial processing applications. It features a knurled grip section for enhanced handling and precise control.

Product Overview

Industrial Knurled Steel Bar

This high-strength metallic bar is engineered specifically for demanding industrial processing applications. Featuring a specialized knurled grip section, it ensures enhanced handling and precise control during operation. Constructed from a durable steel alloy, the bar offers exceptional longevity and robust resistance to wear, making it an ideal choice for a wide range of machining and forming tasks.

Material & Construction

Material Composition	Durable Steel Alloy
Key Features	Knurled Grip, High-Strength, Wear-Resistant

Application

Suitable Operations

- Industrial Machining
- Forming Operations
- Precision Processing
