

L-Type Single Girder Gantry Crane

This L-type gantry crane is a single girder crane with an L-shaped structure that provides a large net space. It features a compact structure, light weight, and low overall height, offering cost savings compared to A-type and U-type gantry cranes.

Product Overview

L-Type Single Girder Gantry Crane

The L-type single girder gantry crane is a heavy-duty lifting solution engineered with a distinct L-shaped structure that provides a large net space for maneuvering. Designed for efficiency, this crane features a compact, lightweight construction with a low overall height, making it a cost-effective alternative to A-type or U-type designs. It is widely utilized in demanding outdoor environments, including docks, railway operations, and industrial yards.

Technical Specifications

Maximum Lifting Capacity

50 tons

Max Capacity

Crane Configuration

Single Girder L-Type Gantry

Applications

Primary Applications

Open-air yards, Docks, Railway operations, Construction sites, Industrial yards

Design Features

Key Advantages

- L-shaped leg design for ample clearance
- Compact structure
- Low overall height
- Lightweight design
- Cost-effective compared to A/U-type
