

Landfill Waste Compactor

This heavy-duty machine is designed for efficient waste management on landfill sites. It features specialized wheels for optimal compaction and maneuverability, along with a comfortable operator cabin.

Product Overview

High-Performance Landfill Management

The XG6201F is a robust garbage compactor engineered for maximum efficiency in waste management and landfill operations. This heavy-duty machine utilizes specialized wheels and a reinforced blade to effectively spread and compress waste, significantly optimizing landfill capacity. Designed for demanding environments, it combines high compaction force with durable construction to ensure reliable performance. The operator cabin prioritizes safety and comfort, offering excellent visibility for precise control during large-scale disposal tasks.

Key Features

Model Identifier	XG6201F
Best For	Municipal Solid Waste, Landfill Operations, Waste Disposal

Operational Capabilities

Compaction Performance

High Compaction Force • Optimized Maneuverability

Design Features

- Reinforced blade for waste spreading
- Specialized landfill wheels
- Ergonomic operator cabin
- High-visibility control layout
