

Large Block Magnet

Large block magnets provide strong and stable magnetic fields. They are used in industrial and research applications such as motors, generators, and scientific instruments.

Product Overview

High-Performance Industrial Magnets

These super-large block magnets are engineered for exceptional magnetic strength and stability across demanding industrial and research environments. Designed for reliability, they serve critical roles in motors, generators, magnetic separators, and complex scientific instrumentation. The series offers flexible material options to ensure optimal performance for your specific engineering requirements.

Technical Specifications

Primary Applications

- Electric Motors
- Generators
- Magnetic Separators
- Scientific Instruments

Available Materials

Neodymium, Ferrite, Samarium Cobalt
