

Large-Scale Water Conservancy Dam

This large-scale dam features multiple spillways and a reservoir. It is constructed of concrete and includes a complex water management system.

Project Overview

Engineering Excellence in Water Management

This large-scale water conservancy project represents advanced engineering in reservoir reinforcement and water resource management. The infrastructure features a sophisticated concrete dam structure equipped with a multi-spillway system designed for optimal water control. It serves as a vital facility for regional water management and has been formally recognized for its high standards in civil engineering construction.

Industry Recognition

2004 Water Conservancy System Civilization Construction Site

Technical Specifications

Key Infrastructure

- Multiple spillway system
- Reinforced dam structure
- Integrated reservoir

Primary Construction

Reinforced concrete
