

Laser Cut Metal Parts

Precision metal parts are manufactured using laser cutting technology for various industrial uses. These original equipment manufacturer (OEM) components offer high accuracy and durability.

Product Overview

Precision Laser Cut Metal Components

These custom-manufactured metal parts are engineered using advanced laser cutting and sheet metal fabrication techniques. Designed for high accuracy and durability, the components are suitable for demanding industrial applications, including machine tools. The production process utilizes high-power machinery to ensure efficient, cost-effective, and high-quality results for international markets.

Manufacturing Capabilities

Core Services

- Laser Cutting
- Sheet Metal Fabrication
- Riveting
- Welding

Laser Cutting Power

15000 KW

Laser Power

Operational Details

Facility Specifications

Metric	Value
Facility Area	6,000 sq meters
Workforce	39 employees
Established	2008

Export Markets

Europe, America, Japan, Korea
