

Laser Engraving and Etching Machine

This engraving and etching machine is designed for precision material processing. It features a fully enclosed chassis with a safety interlock system, ensuring operator safety during operation.

Overview

Precision Laser Processing

This laser engraving and etching machine is engineered for high-precision material processing across a variety of substrates including wood, acrylic, and plastics. Featuring a fully enclosed chassis with an integrated safety interlock system, it prioritizes operator protection while maintaining a clean environment through its built-in exhaust system. With adjustable power and speed controls, this versatile unit is ideal for intricate designs and professional workshop applications.

Technical Specifications

Safety Features

Fully Enclosed Chassis • Safety Interlock System • Integrated Exhaust System

Compatible Materials	Wood, Acrylic, Plastics
Mobility	Yes
Work Area Illumination	Yes
