

# Laser Machine Dust Extraction Fan

This dust extraction fan is designed for use with laser machines. It removes dust and fumes generated during laser processes to maintain a clean and safe working environment.

## Product Overview

### Professional Dust Extraction Solution

This high-performance dust-exhausting fan is specifically engineered for integration with laser cutting, engraving, and marking machinery. It effectively captures particulate matter and fumes generated during operation, ensuring a cleaner, safer workspace and protecting sensitive machine components. Built for durability and consistent airflow, this unit is designed to maintain optimal laser performance while operating at low noise levels.

## Performance Specifications

### Key Features

- High airflow capacity
- High static pressure
- Low noise operation
- Robust construction

### Compatible Applications

Laser Cutting, Laser Engraving, Laser Marking

## Installation & Compatibility

### Connection Interface

Integrated flange for easy duct connection

### System Integration

Yes
