

Lathe Milling Drilling Combination Machine

This combination machine integrates lathe, milling, and drilling functions into one compact unit. It is designed for metalworking tasks, offering versatility and precision in a single machine.

Overview

Versatile Metalworking Solution

The MP290V is a precision combination machine engineered to handle lathe, milling, and drilling operations within a single, compact footprint. Built with high-grade casting and hardened, ground guideways, it ensures exceptional stability and durability for small workshops and educational environments. Its variable speed DC motor and power longitudinal/cross feeds allow for optimal material removal across a wide range of metalworking tasks.

Technical Specifications

Key Features

- Hardened and ground guideways
- Dovetail column with fine downfeed
- Power longitudinal and cross feeds
- Variable speed controlled DC motor

Construction

High-grade casting, Hardened guideways, Ground guideways
