

LCD Backlight Device

These lighting devices are specifically designed for use in LCD screens. They provide the necessary backlighting or edge lighting to illuminate the LCD panel, allowing images and text to be visible.

Product Overview

LCD Backlight Device

This high-quality lighting device is specifically engineered for integration into Liquid Crystal Display (LCD) screens. It provides essential backlighting and edge lighting capabilities, ensuring optimal visibility for images and text on the display panel. Designed for reliability, it serves as a crucial component for computer peripherals, monitors, and various electronic information products.

Technical Details

Lighting Method

Backlighting • Edge Lighting

Primary Application

LCD Screen Illumination

Component Category

Electronics Information Products, Computer Peripherals, Monitor Components
