

LCD Display Board

This LCD display board is designed to integrate into electronic systems. It serves as a mainboard or power supply board for LCD displays.

Product Overview

Professional LCD Display Mainboard

This high-density electronic circuit board is engineered for integration within LCD display systems. It features a robust design with integrated thermal management solutions, including multiple heat sinks to ensure stable operation. The board is equipped with essential power and data connectors, making it a reliable component for display maintenance or system assembly.

Technical Specifications

Thermal Management

Integrated Heat Sinks

Connectivity Features

- Wiring harnesses
- Power cables
- Integrated connectors

Component Type	LCD Mainboard / Power Supply Board
Build Complexity	High-density, Multi-component
