

# LCD Display Component with Mounting Structure

This LCD display component is designed for integration within electronic devices. It features multiple rectangular cutouts and support structures for secure mounting.

## Overview

### Precision LCD Mounting Component

This LCD display component is engineered for seamless integration into electronic display assemblies, such as computer monitors. It features a robust white plastic construction with integrated support structures and precise rectangular cutouts. Designed for stability and durability, this component serves as a critical mounting bracket to ensure proper alignment and structural integrity within the final device.

## Physical Characteristics

Material	High-grade plastic
Color	White

## Design Features

### Key Design Features

- Multiple rectangular cutouts
- Integrated support structures
- Protruding vertical tab
- Horizontal bottom support edge

## Applications

Typical Use Cases	Computer Monitors, Electronic Display Assemblies, Device Mounting
