

LCD Universal Testing Machine

The LCD universal testing machine is a versatile solution for material testing. Featuring an LCD interface, it offers precise control and measurement for research, quality control, and material testing applications, performing tensile, compression, and bending tests with accuracy.

Overview

Professional Material Testing Solution

The WED series LCD universal testing machine is a versatile, high-precision solution designed for diverse material testing requirements. It features a user-friendly LCD interface for effortless operation and monitoring during intensive mechanical testing. Engineered to meet rigorous industry standards, this machine provides reliable, accurate results for research and quality control applications.

Technical Specifications

Available Capacity Range

- 100 KN
- 300 KN
- 600 KN
- 1000 KN

Supported Testing Functions

Tensile, Compression, Bending

Control Interface

LCD Digital Display

Features

Key Operational Benefits

- Precise control and measurement capabilities
- High accuracy for reliable data output
- Versatile testing platform for varied mechanical properties
- Designed for both R&D and quality control environments
