Product Overview

High-Performance Indoor Cultivation Lighting

This LED grow light is engineered for professional indoor plant cultivation, offering a modular bar design that ensures uniform light distribution across your growing canopy. It features a full-spectrum output specifically tuned to support all plant development stages, from initial seedling growth through flowering. Built with durable materials, the fixture incorporates efficient heat dissipation to ensure longevity and consistent performance in demanding indoor environments.

Technical Specifications

Design Type	Modular LED Bar System
Light Spectrum	Full Spectrum
Supported Growth Stages	Seedling, Vegetative, Flowering

Features

Control Features

- Central power management
- Dimming capabilities

Construction

Durable Materials • Efficient Heat Dissipation
