

LED Spotlight Floodlight Emergency Light

This high-intensity LED emergency light is designed for use in telecommunication engineering. It combines spotlight and floodlight functionality for versatile illumination in emergency situations.

Overview

Professional Emergency Lighting Solution

The LED-749 is a high-intensity emergency light engineered specifically for telecommunication engineering and field applications. This versatile unit combines spotlight and floodlight functionality, ensuring optimal illumination in diverse emergency scenarios. Built for durability and reliability in demanding environments, it features an integrated handle for enhanced portability and includes an extendable antenna for added utility.

Technical Specifications

Primary Applications

Telecommunications • Emergency Field Work • Power Outage Backup

Model Number	LED-749
Illumination Modes	Spotlight, Floodlight

Design & Build

Portability & Design

- Built-in carrying handle
- Extendable antenna
- Durable construction for demanding environments
