

LED Television with Infrared Touch Frame

This product is a high-precision infrared touch frame with multi-point real gesture recognition. With a touch handwriting system and rich input ports including TV, AV, and YPBPR, it is suitable for meetings and teaching.

Overview

Interactive Display Solution

This high-precision LED television features an integrated infrared touch frame designed for professional environments such as meeting rooms and classrooms. It supports advanced gesture recognition, including single, dual, and multi-point touch capabilities for seamless handwriting and interaction. Equipped with built-in high-performance PC hardware and a pre-installed Windows operating system, it functions as an all-in-one interactive machine.
