

Light-Duty Radial Tire for Highway Use

This light-duty radial tire is designed for highway applications, especially for continuous travel exceeding 800 kilometers. It features a super hard-wearing compound tread, low calorificity rubber material for heat resistance, and a three-breaker structure for improved distance and high-speed travel.

Product Overview

High-Performance Highway Radial

The XR168 is a premium light-duty radial tire engineered specifically for demanding highway applications. It features a specialized wear-resistant compound and heat-dissipating materials to ensure reliability during continuous long-haul journeys. Built with a robust three-breaker structure and high-strength steel components, this tire offers superior durability and performance for travel exceeding 800 kilometers.

Technical Specifications

Performance Highlights

800 KM

Recommended Continuous Travel Distance

Key Material Benefits

Super hard-wearing compound • Low calorificity rubber • High-temperature resistance

Design & Construction

Light-Duty Radial, Three-Breaker Structure, High-Strength Steel Carcass, High-Strength Bead Structure

Usage Information

Recommended Usage

- Highway application
- Long-distance transport
- Suitable for all wheel positions on improved road surfaces
