

Lightweight Marine Fire Hose

This synthetic fire hose features a thin-walled, light internal lining, resulting in a lightweight design and small coil diameter. Its limited space requirement makes it suitable for fire brigades and recommended for use in wall hydrant cabinets.

Product Overview

Lightweight Marine Fire Hose

This lightweight marine fire hose is engineered for high-pressure water discharge and critical firefighting applications. Constructed with a circular woven polyester jacket and a specialized synthetic rubber lining, it offers excellent durability, flexibility, and resistance to abrasion. Designed for harsh marine environments, this hose ensures reliable water delivery and long-term performance in demanding safety situations.

Construction & Materials

Jacket Material	Circular woven firm polyester fibre, double twisted warp
Internal Lining	Thin walled synthetic rubber
Lining Technique	Special vulcanising technique

Performance Metrics

Rated Pressure

1.5 Mpa
