

Line Interactive Uninterruptible Power Supply (UPS)

This line interactive UPS offers battery backup and surge protection. It features automatic voltage regulation (AVR) to stabilize AC power and maintain power during outages, allowing for safe shutdown of equipment and preventing data loss.

Overview

KI Series Line Interactive UPS

The KI Series Line Interactive UPS is designed to provide reliable battery backup and essential surge protection for sensitive electronic equipment. Featuring automatic voltage regulation (AVR), it stabilizes AC power to protect connected devices from damaging voltage fluctuations. This unit ensures continuous operation during power outages, allowing for safe equipment shutdowns and data loss prevention. Its line-interactive topology offers superior power conditioning compared to standard offline systems, making it an ideal choice for computers and networking hardware.

Technical Features

Topology	Line Interactive
Automatic Voltage Regulation	Yes
Protection Features	Battery Backup, Surge Protection, Voltage Regulation, Power Conditioning

Applications

Recommended Use

- Computers
- Networking Equipment
- Critical Electronic Devices
