Product Overview

Reliable Power Protection

This line interactive uninterruptible power supply (UPS) is engineered to provide essential backup power and voltage regulation for sensitive electronic equipment. Featuring fully digitized microprocessor control, it ensures continuous operation during power outages while protecting against voltage sags, surges, and electrical noise. With an integrated LCD display for real-time monitoring and optional cold-start capability, this unit is an ideal solution for computers, servers, and networking devices.

Technical Specifications

Control System	Fully digitized microprocessor control
Input Voltage Range	Wide input voltage range
Cold Start Capability	Yes

Interface & Monitoring

Display Type

LCD Display

Performance Metrics

Available Capacity Options

- 1500VA
- 3000VA

Application Compatibility

Ideal Use Cases	Computers, Servers, Networking Equipment, Critical Electronics
