

# Linear Fluorescent Lamps for LCD Backlighting

These linear fluorescent lamps are used for backlighting in LCD screens. The lamps come in varying lengths for different screen sizes and lighting needs.

## Product Overview

### Professional LCD Backlighting Solutions

These linear fluorescent lamps are precision-engineered components designed specifically for backlighting applications in LCD screens and electronic displays. Featuring a classic tubular design with integrated electrodes, these lamps utilize gas-discharge technology and phosphor coating to deliver consistent, uniform illumination. They are available in various lengths to accommodate a wide range of screen sizes and legacy display requirements.

## Technical Specifications

### Primary Application

LCD Backlighting • Display Illumination • Electronic Devices

### Design Characteristics

- Tubular glass construction
- End-cap electrodes
- Gas-discharge illumination
- Phosphor-coated interior

### Lamp Technology

Linear Fluorescent
