

Linear Vial Liquid Filling Machine

This linear type filling machine is designed for filling various small bottles with oil and chemical liquids. It utilizes a linear filling system and is suitable for PET, glass, and other types of bottles.

Product Overview

High-Precision Linear Filling Solution

This linear-type filling machine is engineered for the automated, high-precision filling of various liquids, including oils, chemical liquids, and food-grade beverages. Designed with a sanitary clamp valve system, it ensures that filling liquid does not touch the valve directly, maintaining high hygiene standards. The machine features a robust 304 stainless steel construction and utilizes an advanced PLC control system for reliable, consistent performance across diverse bottle types.

Technical Specifications

Capacity

3000 BPH

Bottles Per Hour

Model	BLDG-L
Bottle Volume Range	0.2L - 10L
Contact Material	304 Stainless Steel
Control System	Mitsubishi PLC

Compatibility

Suitable Applications

- Mineral & Pure Water
- Fruit Juice & Tea
- Milk
- Wine
- Salad Oil
- Shampoo

Compatible Bottle Types	PET Bottles, Glass Bottles, Anomalistic Bottles
--------------------------------	---
