

Linkage Rod with Central Bracket

This is a metal linkage rod designed for mechanical systems. It has mounting points at each end and a central bracket, allowing pivoting or articulation.

Product Overview

High-Performance Linkage Solution

This black-finished metal linkage rod is engineered for precision mechanical applications, including vehicle suspension or articulating systems. Featuring a robust central bracket and reinforced mounting points, it is designed for durability and stable performance under operational load. The design incorporates dedicated spaces for bushings or bearings, ensuring smooth, controlled movement in critical motion-control assemblies.

Physical Attributes

Surface Finish	Black anti-corrosion coating
Component Type	Mechanical Linkage Rod

Mechanical Design

Mounting Features	Central Bracket, Dual-end mounting points, Bushing-ready
Core Function	Articulating mechanical connection
