

Liquid and Gas Meter

This meter is designed for accurate measurement of both liquid and gas flow. It provides reliable data for monitoring and control in various industrial applications.

Product Overview

High-Efficiency Crushing Performance

This industrial crushing machine is engineered for both primary and secondary crushing tasks across various material types. Designed with a robust construction, it utilizes a heavy-duty rotor and wear-resistant hammers to ensure long-term reliability and consistent performance. The unit offers adjustable settings to precisely control output particle size, maximizing operational efficiency for large-scale mining, quarrying, and construction applications.

Technical Specifications

Maintenance Features

- Easy maintenance design
- Simplified wear part replacement
- Minimized operational downtime

Suitable Materials

Limestone, Coal, Gypsum, Shale

Performance Metrics

Performance Highlights

1 Ratio

High Reduction Ratio

Target Industries

Mining • Quarrying • Construction
