

Liquid and Semi-Liquid Filling Machine

This packaging machinery is designed for precise and efficient filling operations. It is suitable for a variety of liquid and semi-liquid products, offering accurate volume control and minimizing waste.

Overview

Precision Filling Solution

This liquid and semi-liquid filling machine is engineered for high-precision and efficient dispensing operations in industrial settings. Constructed with durable stainless steel, it ensures optimal hygiene standards and long-term reliability for your packaging line. The system features an integrated conical hopper for consistent material flow and an adjustable dispensing nozzle, allowing for accurate volume control while minimizing product waste.

Construction & Design

Material Construction

Stainless Steel

Key Design Features

- Conical hopper for consistent material flow
- Adjustable dispensing nozzle
- Stable base for secure operation
- Adjustable height stand

Operational Capabilities

Operational Benefits

- Accurate volume control
- Minimized material waste
- Integration with different container sizes

Suitable Materials

Liquid, Semi-Liquid
