

Lithium Bromide Absorption Heat Pump for Industrial Cooling and Heating

This industrial lithium bromide absorption heat pump is designed for large-scale cooling and heating applications. The unit features a high-efficiency heat exchanger and a robust control system for reliable operation.

Product Overview

Industrial Absorption Heat Pump

This industrial lithium bromide absorption heat pump is engineered for large-scale cooling and heating applications. Utilizing a closed-loop system with lithium bromide as the absorbent and water as the refrigerant, it offers a reliable solution for complex thermal management. The unit is designed for durability and high performance in demanding environments, making it suitable for industrial processes, district cooling, and combined heat and power systems.

Technical Specifications

Application Areas

- Industrial processes
- District cooling
- Combined heat and power (CHP) systems
- Large-scale heating

Working Fluid	Lithium Bromide (Absorbent), Water (Refrigerant)
System Type	Closed-loop absorption

Key Features

Key Features

High-efficiency heat exchanger • Robust control system • Durable construction
