

Livestock Farming Specialty Steel

This specialty steel is designed for livestock farming applications. It withstands the corrosive environments with high humidity found in sheds, thereby extending the service life of the structures.

Product Overview

Corrosion-Resistant Livestock Farming Steel

This specialty steel is engineered specifically for the demanding environments of livestock farming facilities. It is uniquely formulated to withstand the highly corrosive conditions created by ammonia from animal waste, high humidity, and the alkalinity of cleaning detergents. By addressing these complex environmental factors, this material significantly extends the service life of agricultural shed structures.

Technical Properties

Ideal Application Environment

- Livestock Sheds
- Agricultural Facilities
- High-Humidity Environments

Resistance Profile

Ammonia Resistant, Detergent Resistant, High Humidity Tolerant
